

# Year 9 – Reasoning with Proportion

## Enlargement & Similarity

Want to know more? Scan the QR code to visit the curriculum overview for Year 9 Maths, including topic summaries, key words, and books that you may want to read in your own time

### What do I need to be able to do?

- By the end of this unit you should be able to:
- Recognise enlargement and similarity
  - Enlarge a shape by a positive SF
  - Enlarge a shape from a point
  - Enlarge a shape by a fractional SF
  - Work out missing sides and angles in a pair of similar shapes.

### Keywords

**Similar Shapes:** shapes of different sizes that have corresponding sides in equal proportion and identical corresponding angles.  
**Scale Factor:** the multiple describing how much a shape has been enlarged  
**Enlarge:** to change the size of a shape (enlargement is not always making a shape bigger)  
**Corresponding:** objects (or sides) that appear in the same place in two similar situations.  
**Image:** the picture or visual representation of the shape

### Recognise enlargement & similarity

Shapes are similar if all pairs of corresponding sides are in the same ratio

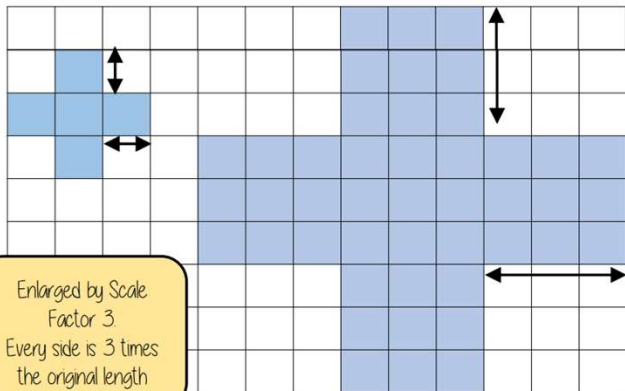

These shapes are similar because all sides are increased by the same ratio

Enlargements are similar shapes with a ratio other than 1

### Enlarge by a positive scale factor

With a scale factor larger than 1 it makes the shape bigger

### Enlarge a shape from a point

#### Scaled distances method

Scale the distance between the point of enlargement and each corresponding vertices

#### Rays method

Multiply the distance from the centre of corresponding vertices by the scale factor along the ray

### Calculations in similar shapes

Don't forget that properties of shapes don't change with enlargements or in similar shapes

The two trapezium are similar find the missing side and angle

Corresponding sides identify the scale factor

$$\frac{12}{6} = 2 \quad \text{Scale Factor} = 2$$

Calculate the missing side

Length (corresponding side)  $\times$  scale factor

$$2\text{ cm} \times 2$$

$$x = 4\text{ cm}$$

Enlargement does not change angle size

Calculate the missing angle

Corresponding angles remain the same

$$130^\circ$$

### Positive fractional scale factor

With a scale factor between 0 and 1 it makes the shape smaller
