

## Year 7 Computer Science Networks Knowledge Organiser

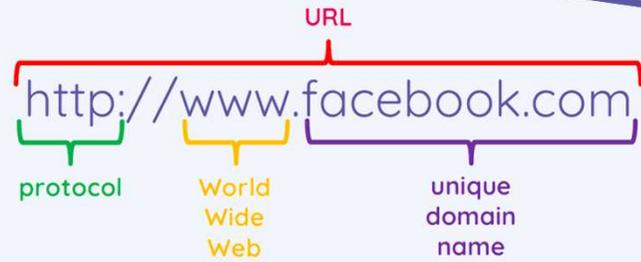

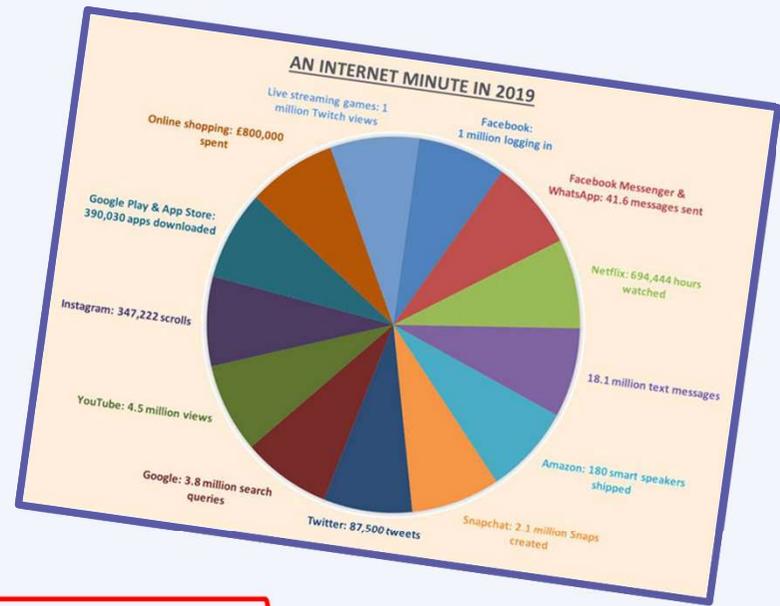

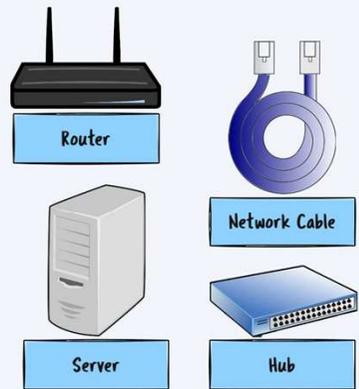

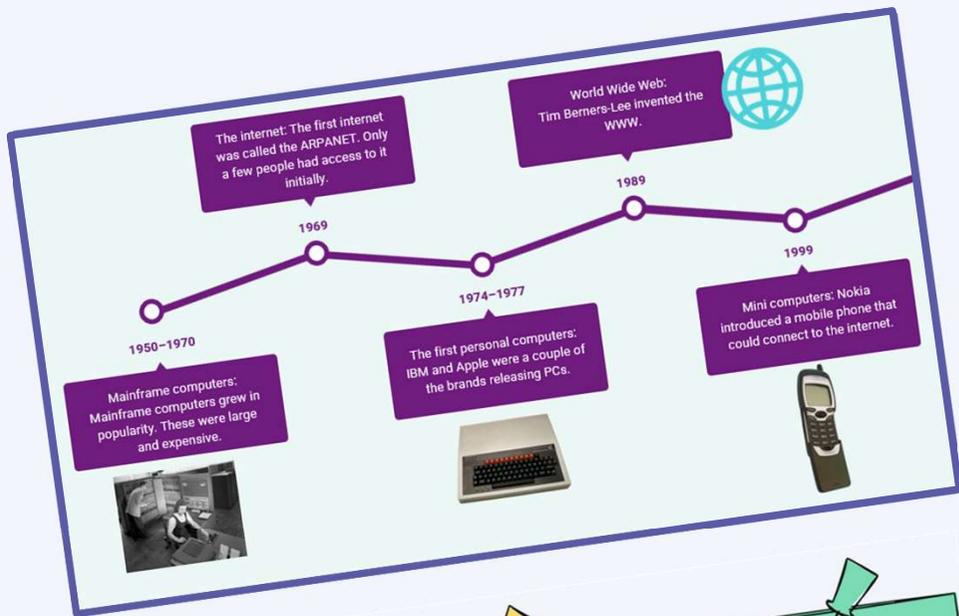

Key Word	Definition
Network	When two or more computers are connected together to allow them to communicate.
Protocol	A set of rules or procedures for transmitting data between electronic devices, such as computers.
Mainframe	A computer used primarily by large organizations for bulk data processing.
Personal Computer	A computer designed for use by one person at a time.
Stand-alone	A computer that is used on its own without requiring a connection to a network.
HTTP	Hypertext transfer protocol – the set of rules that control how data is transferred on a network.
Cable	A number of copper wires with plastic plugs that connect into sockets on devices used to connect together different devices in a network.
Hub	Connects a number of computers together.
Server	A powerful computer which provides services. There are many different types, e.g. file server.
Router	Forwards messages from one network to another and acts as a gateway.
ISP	Internet Service Provider – the company which is used to connect to the internet.
Wired	Where you physically plug your computer or docking station into an ethernet cord or wall jack.
Wireless	Computer networks that are not connected by cables of any kind.
3G	Third generation of wireless mobile telecommunications technology.
Bit	The smallest unit of data that a computer can process and store.
Megabit	A unit for measuring the speed at which information is sent between computers, equal to one million bits.
Gigabit	As megabit, but one billion bits.

## Year 7 Computer Science Networks Knowledge Organiser

Key Word	Definition
Buffering	When your device pauses mid-task because your system will put your task on hold until enough data is downloaded to allow the music or video stream to play without lag
4G	Fourth generation of wireless mobile telecommunications technology
5G	Fifth generation of wireless mobile telecommunications technology.
Wi-Fi	A wireless technology used to connect computers, tablets, smartphones and other devices to the internet.
Bandwidth	The amount of data that can be moved from one point to another in a given time.
Broadband	High-speed internet access.
Internet	A worldwide network of computers. It is the physical hardware, i.e., the cables, the routers, and other pieces of hardware used to connect devices together.
Router	Forwards messages from one network to another and acts as a gateway.
Packet	A unit of data made into a single package that travels along a given network path.
Packet Header	A "label" of sorts, which provides information about the packet's contents, origin, and destination.
Packet Payload	The part of a data packet containing the transmitted data.
IP Address	The address of the router that connects to the internet, which is unique for every device on the internet, and made up of 4 groups of numbers between 0 and 255, each separated by a full stop.
TCP	Transmission Control Protocol - a transport protocol that is used on top of IP to ensure reliable transmission of packets.
IP	The method or protocol by which data is sent from one computer to another on the internet.
World Wide Web	Service provided on the internet. It is the websites, web pages, and links found on the internet.
Internet Services	The range of facilities provided by the internet.

## Year 7 Computer Science Networks Knowledge Organiser

Key Word	Definition
Email	An internet service that allows people to send and receive electronic messages.
Spam	Emails that you receive that you do not want.
Privacy	Keeping information about yourself to yourself.
Security	Protecting your computer devices and data from unauthorised access.
Voice over Internet Protocol (VoIP)	It allows voice data to be sent in packets over the internet.
Internet of Things (IoT)	Taking everyday 'things' and connecting them to the internet to allow us to gather information, send information, or both.
HTTP	Hypertext Transfer Protocol. Messages sent between your browser and the website are readable to other devices. It is not secure.
HTTPS	Hypertext Transfer Protocol Secure. Messages sent between your browser and the website are encrypted so other devices cannot understand it. It is secure.
URL	Uniform Resource Locator. It is the address of a World Wide Web page and is sometimes called the 'web address'.
Domain Name	A unique, easy-to-remember address used to access websites.
Web Browser	A piece of software used to view information on the World Wide Web.
Web Server	A server located on the internet that holds website web pages.
Web Page	A document that is accessible through the internet on a web browser.
Search Engine	A website that allows you to look up information on the World Wide Web.
Domain Name System	A service on the internet maps domain names to IP addresses. It acts as the 'phone book' of the internet.
