

Year 8 Computer Science Mobile App Development Knowledge Organiser

Key Word	Definition
Decomposition	Breaking complex problems down into smaller, more manageable ones.
Mobile	Relating to mobile phones, handheld computers, and similar technology.
Properties	The settings of an object on a computer.
App	Short for application - a software program that's designed to perform a specific function directly for the user.
Event-Driven Programming	Where the flow of the program is controlled by events.
Variable	A value that can change, depending on conditions or on information passed to the program.
Sequence	The order that commands are executed by a computer.
Workspace	The white area on the right side of Code. org's online learning system where you drag and drop commands to build your program.
Ids	Used for referencing the text label in event handlers or other UI element modification functions.
Parameters	Allow a program to specify the details of how a function works when it is called, rather than when the program is defined.
Object Properties	Control things like the object's size, rotation, and position.
Object Ids	Used for referencing the object in event handlers or other UI element modification functions.
Error	Any issue that arises unexpectedly that cause a computer to not function properly.
Event Handler	A monitor for a specific event or action on a computer.
Input	The information computers get from users, devices, or other computers.
Checkbox	A small box in which to place a check mark to make a selection.

Key Word	Definition
Decomposition	Breaking complex problems down into smaller, more manageable ones.
Object Ids	Used for referencing the object in event handlers or other UI element modification functions.
Object Properties	Control things like the object's size, rotation, and position.

Assessment Rubric

	Emerging [1-3]	Expected [4-7]	Exceeding [8-10]	Score
Success Criteria	<input type="checkbox"/> Has added at least one extra measurable success criterion to the list.	<input type="checkbox"/> Has added success criteria to the list, most of which are relevant and measurable. Some criteria are subjective.	<input type="checkbox"/> Has added success criteria to the list, all of which are relevant and measurable.	
Screen Designs	<input type="checkbox"/> Basic outline of what is to be included on each screen. Little to no annotation	<input type="checkbox"/> Appropriate screen designs provided, both of which act as a guide to style and layout.	<input type="checkbox"/> Screen designs provided that are fully annotated to provide clear guidance on style, positions, ids, and any linked events.	
Decomposition	<input type="checkbox"/> Has attempted to decompose the problem into more manageable steps. <input type="checkbox"/> Decomposition is partially helpful, but could be broken down further to help support the creation of the app.	<input type="checkbox"/> Has fully decomposed the problem into sensible steps. <input type="checkbox"/> Has partially decomposed each step further, which will provide some guidance to tackle each step.	<input type="checkbox"/> Has attempted to decompose the problem into more manageable steps. Has fully decomposed the problem into sensible steps. <input type="checkbox"/> Has decomposed each step further into sensible, manageable steps.	
App Development	<input type="checkbox"/> App is partially functional and only meets some of the success criteria. <input type="checkbox"/> Has successfully used an event handler to perform an action triggered by the user.	<input type="checkbox"/> App is mostly functional and meets most of the success criteria. <input type="checkbox"/> Has successfully implemented: <ul style="list-style-type: none"> ○ Event handling ○ Variables ○ Selection 	<input type="checkbox"/> App is fully functional and meets all of the success criteria. <input type="checkbox"/> Has successfully implemented and extended the project to include: <ul style="list-style-type: none"> ○ Event handling ○ Variables ○ Selection ○ Iteration 	
Total Score:				

Programming

Learnt why decomposition is important and how to apply it

Added functionality to the objects the user interacts with on the screen

Identified and resolved common errors

Passed the value of a variable into a label

Learned how to handle user input

Used sequence, selection, user input and variables in a block-based language

You programmed an app!!

Design and Development

Designed the welcome screen and customised the properties

Identified and resolved common errors

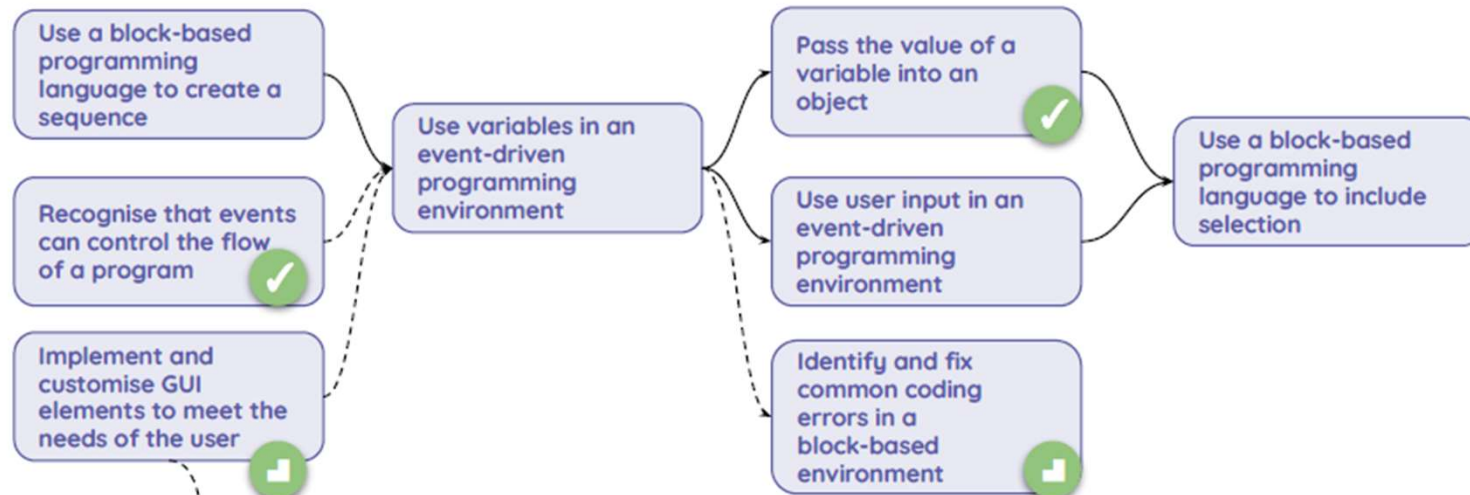

Chose a project to create and developed success criteria

Used decomposition to break down the task of building the app

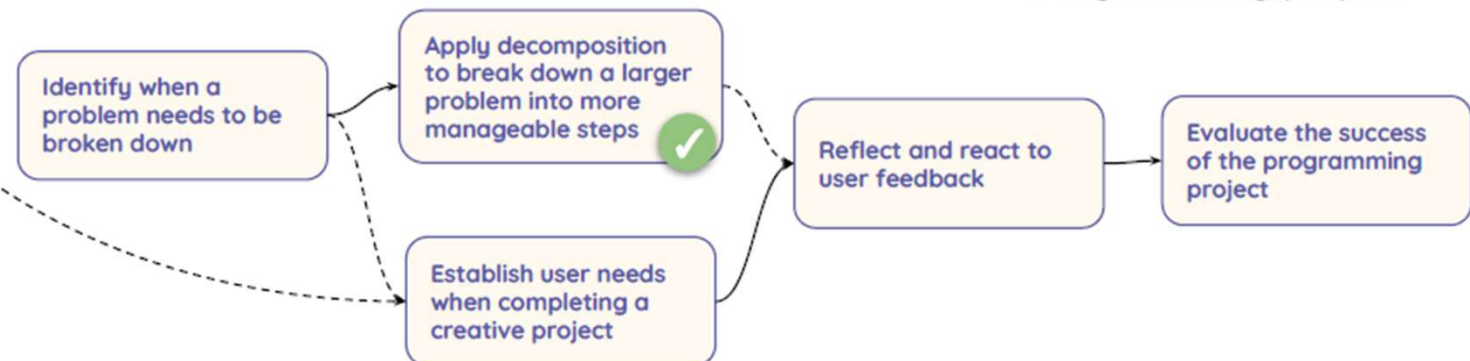

Reflected and reacted to user feedback

Evaluated the success of your app

Programming

Programming project

 **Exploratory:** May motivate exploration, introduce an idea, provide an essential foundation, or the beginning of understanding.

 **Landmark:** Points where ideas are brought together or where ideas stem from. May expand flexibility and associations with other areas.
